Faye Kollig Portfolio

I am a student of Media and Information with experience in collaborative academic research, looking to pursue a career in UX research and design.

With in-class experience in developing and evaluating human-centered technology as well as real-world experience studying social cybersecurity & online communities, I am a student of how real people use technology. I have a solid grounding in programming, marketing, and design, and throughout my life I've loved storytelling, learning all sides of the story, and building meaningful connections with the people around me. Combining my interest in computers with my interest in humanity, I want to pursue a career in web development, research and design that will allow me to collaborate with others, learn about new ways of thinking and designing, and develop innovative solutions for the end user.

Personas

Prospective employer
Wants to get a sense of a potential hire's experience, skill set, and thought processes

Peer
Interested in learning about the types of projects others studying similar topics are doing
